

# 1LW

In computing we have been learning how to program Beebots. We had to remember to press clear before each new program.

We used a game on ipads to help us learn our number bonds to 10.

We used subtraction bones to write a subtraction number sentence then we used a number line to work out the answer. Finally we checked the answer on our bone to make sure we had made the right amount of jumps backwards.

In PE we have been learning to skip with our knees and elbows at 90 degrees, and side step and gallop leading with alternate legs...we found it very tricky but got better each week!
